Available May 2027

Education

Northeastern University — May 2027 | MGPA: 3.6/4.0
B.S. in Computer Science, Systems Concentration — *Boston, MA*

Coursework: Computer Networks, Computer Systems, Foundations of Software Engineering, Algorithms & Data Structures, Object-Oriented Design, Digital Design & Computer Architecture, Foundations of Data Science, Systems Security, Cybersecurity

Experience

Wayfair — Jul 2026 – Present
Software Engineering Co-op — *Boston, MA*

- Building a supplier-agnostic e-label API that unifies 4 vendor integrations behind one documented interface, translating business requirements into a reusable service powering new outlet launches
- Shipped customer-facing POS checkout flows: in-store scan-to-basket customer switching and live associate-entry sync, tested and released under code review with the retail engineering team
- Own front-of-house device stack across all Wayfair physical retail brands (AllModern, Birch Lane, Joss & Main, Perigold): e-labels, mobile, and customer/associate-facing point-of-sale

Wolters Kluwer — Jul 2025 – Jun 2026
Software Engineer — *Boston, MA*

- Overhauled Relay JMS broker serialization with json-io across 20+ microservices, eliminating timeouts and keeping the messaging layer highly available at production scale
- Built a Java Spring microservice for CME credit issuance inside Expert AI's clinician-facing workflow, coordinating design and rollout with partner service teams
- Optimized Expert AI search and filtering across 20+ microservices, improving clinical query relevance at scale
- Integrated Expert AI into CME accrual/redemption microservices, expanding GenAI decision support to 250K+ clinicians
- Implemented OIDC/IdP authentication via Azure across 20 enterprise health systems, securing 10K+ clinicians

SculptAI — Jan 2025 – Aug 2026
Software Architect — *New York, NY*

- Maintained 99.99% uptime across 1–2M monthly model calls for 2K paying users via AWS WAF, Datadog, and Kubernetes, tuning capacity and alerting for a scalable, highly available stack
- Architected Flask backend with RAG pipeline for personalized workout recommendations using Bedrock KB
- Led eng org restructure at $1M-funded startup, partitioning teams into DevOps, dev, and agentic workflows
- Evolved RAG stack from LangChain to Vespa to zero-ops Bedrock KB, improving retrieval and reducing overhead
- Continue as technical advisor on system design, architecture, and agentic-workflow direction

Chevron New Energies — May 2024 – Aug 2024
Software Engineer Intern — *Houston, TX*

- Built RESTful APIs and big-data pipelines using Azure Data Factory, improving product efficiency by 40%
- Implemented CI/CD workflows using Azure DevOps and Kubernetes, enabling automated deployment and rollback

Projects

Kepler | *Rust, C++, Raft, LSM-tree, MVCC, Tokio* — Mar. 2026 – Present

- Built a distributed, fault-tolerant key-value store in Rust with from-scratch Raft consensus and LSM-tree engine
- Implemented Raft election, log replication, and live membership changes for high availability across nodes; storage: memtable, WAL, leveled SSTables
- Added MVCC transaction layer providing snapshot isolation and linearizable reads across multi-node Raft cluster
- Documented storage and consensus internals alongside single-tier compaction with full SSTable rewrite every 4 flushes

Sentinel | *Next.js, FastAPI, Claude, pgvector, OpenTelemetry, Docker* — Apr. 2026 – Present

- Built an AI SRE agent autonomously triaging incidents via tool-use over Prometheus, Tempo, and Loki telemetry
- Built pgvector RAG over runbooks and postmortems with prompt caching on frozen schemas; 100% eval accuracy
- Human-in-the-loop remediation gated behind approval; running live in SculptAI production triaging incidents

NOAA AUV Sonar Detection | *Python, PyTorch, AWS Neuron SDK, SageMaker* — April 2025 – July 2025

- Trained CNN models on thermal sensor spectrograms to detect novel aquatic signatures for NOAA AUVs
- Refined architecture and loss formulation to address class imbalance and sensor noise, improving model detection
- Designed AWS Neuron SDK deployment path for onboard custom-silicon inference under hard real-time limits

Skills & Honors

Languages/Tools: Java, Python, TypeScript, JavaScript, C, C++, Rust, Bash, Linux, Git, AWS, Azure, Docker, Kubernetes, Terraform, Jenkins, Buildkite, Groovy, PostgreSQL, GraphQL

Frameworks & Libraries: Spring, Flask, FastAPI, Node.js, Express, React, Next.js, PyTorch, TensorFlow, Pandas

AI / Agentic Tooling: Devin, Cursor, Claude Code, Claude Cowork, GitHub Copilot, CodeRabbit

Honors: Dean's List (All Semesters), Tech Lead at Northeastern Electronic Racing, PawHacks, json-io OSS Contributor
