Available May 2027

EDUCATION

Northeastern University

May 2027 | MGPA: 3.6/4.0

B.S. in Computer Science, Systems Concentration

Boston, MA

Coursework: Systems Security, Cybersecurity, Computer Systems, Computer Networks, Computer Architecture, Foundations of Software Engineering, Algorithms & Data Structures, Object-Oriented Design, Data Science

Honors: json-io OSS Contributor, PawHacks, Tech Lead at Northeastern Electronic Racing, Dean's List (all semesters)

EXPERIENCE

Wayfair

Jul 2026 – Present

Software Engineering Co-op

Boston, MA

- Collapsing 3 diverged e-label vendor integrations (Vusion, Pricer, Solum) onto one supported REST interface, driving dynamic price updates across 50,000+ shelf labels and cutting new-site onboarding from weeks to days
- Operate 500+ front-of-house POS and e-label devices at 99.9% uptime with sub-3-minute average resolution, debugging device, network, and storage failures across all four Wayfair retail brands

Wolters Kluwer

Jul 2025 – Jun 2026

Software Engineer

Boston, MA

- Shipped OIDC/IdP authentication and token-refresh flows via Azure into 20 enterprise health systems we did not control, securing 10K+ clinicians with zero degradation during peak EHR synchronization windows
- Held 92% uptime for the Expert AI inference pipeline serving 250K+ daily active clinicians, triaging failures across auth, service, and data layers
- Overhauled JSON serialization across 20+ microservices via upstream contributions to the json-io open-source library, cutting payload size 35% and inter-service latency 28% during high-traffic clinical query periods

SculptAI

Jan 2025 – Aug 2026

Software Architect

New York, NY

- Built Sentinel, a production AI SRE agent that debugs across the stack via tool-use, correlating Prometheus, Tempo, and Loki telemetry to surface root cause; cut P0/P1 MTTR from 45 to 12 minutes and MTTD 60%
- Implemented a FAISS in-memory vector store with periodic re-indexing and AWS S3 Vectors for persistence, holding retrieval p95 under 150ms at peak while cutting vector storage cost roughly 70% vs. OpenSearch Serverless
- Re-orged 20+ engineers into product-aligned squads (Retrieval, Generation, Observability); now technical advisor

Chevron New Energies

May 2024 – Aug 2024

Software Engineer Intern

Houston, TX

- Cut change failure rate from 15% to 2% with multi-stage Azure DevOps release pipelines that gate every promotion on automated unit, integration, and performance tests in staging, catching regressions before production
- Orchestrated 200+ Azure Data Factory pipelines across 10+ third-party data sources at a 99.95% success rate, holding retry-induced latency overhead under 1% via exponential-backoff retry policies

PROJECTS

Kepler | Rust, C++, Kubernetes, Raft, LSM-tree, MVCC, Tokio

Mar. 2026 – Present

- Built a distributed, linearizable key-value store in Rust with from-scratch Raft consensus and an LSM-tree engine
- Cut API server latency 25% and held 99% uptime across 100 Kubernetes pods under write-heavy load; replaced managed etcd with a self-hosted MVCC layer, saving \$2,500/month and raising TPS headroom 30%

NOAA AUV Sonar Detection | Python, PyTorch, AWS Neuron SDK, SageMaker

Apr. 2025 – Jul. 2025

- Optimized CNN inference to sub-50ms p99 latency on a single AWS Inferentia2 core for real-time onboard AUVs
- Trained CNN models on thermal sensor spectrograms to detect novel aquatic signatures, reaching 94.7% precision and 91.2% recall on a 10,000+ event test set while cutting false positives 75% over prior baselines

SKILLS & INTERESTS

Languages & Tools: Kubernetes, Docker, Linux, Terraform, Bash, Python, Go, Rust, PostgreSQL, SQL, MySQL, MongoDB, AWS, Azure, GCP, Buildkite, gRPC, GraphQL, TypeScript, JavaScript, C, C++, Java, Kotlin, Swift

Frameworks & Libraries: FastAPI, Flask, Node.js, Express, Spring Boot, PyTorch, TensorFlow, React, Next.js

AI / Agentic Tooling: Claude Code, Claude Cwork, Devin, Cursor, GitHub Copilot, CodeRabbit

Interests: Avid Cleveland Browns fan, Weightlifting, Rock Climbing, BJJ, Running
